SPECIAL LIMITED REGIONAL OFFER

Ref. No. 24860-10 / BS , Date 28/04/2010

Dear Sirs,

We would like to inform you that in certain regions to begin with March 2010 Limpieza Purotecnica S.A. announces Limited Regional Sales Program of its unique developed and highly efficient CAVI-JET CLEANING EQUIPMENT. Basing on the effect of cavitation – forming thousands of micro-bubbles which explode while touching the surface being treated – CAVI-JET is considered to be revolutionary equipment for underwater cleaning advantageously differing from the traditional cleaning methods and technologies represented in today's market.

Throughout the years CAVI-JET EQUIPMENT & TECHNOLOGY have been proving their incomparable advantages in the fields of ship (of any dimensions), offshore oil and other stationary and moving sea & river objects with round o'clock reliable functioning in any conditions, which is confirmed by the leading companies in this sphere. The unique selling point of CAVI-JET SYSTEMS - the rare combination of efficiency, safety for all the being cleaned surfaces, absence of traumatism, compact sizes, absolute ecological compatibility and reliability – advantageously distinguish CAVI-JET TOOLS for underwater cleaning from all the existing cleaning methods.

Among the CAVI-JET SYSTEMS & DEVICES, which are all functioning using only outside sea or fresh water without any mechanical tools at a not-high pressure (which allows not to do harm to any surface being cleaned and excepts the possibility of any diver's trauma) there are lots of different tools which are appropriate for any specific purposes and conditions. Please, kindly refer to the attached hereto basic characteristics and some other useful data on CAVI-JET TOOLS for more detailed information.

You will find general data on our web sites www.cavi-jet.com and www.purotecnica.com which will be soon globally updated and will include all the latest information - new types of CAVI-JET EQUIPMENT (including CAVI-JET BLUE SERIES with recently introduced devices for higher performance such as Turbo orifice, Rotary noze, Clean & Polish heads, Multicavitator universal pistol etc), newly realized projects, Cavi-Jet Worldwide Application and many others.

Our specialists will always help you with the choice of the appropriate equipment, its configuration and kits for all your purposes.

Please, do not hesitate to contact us for any inquiries.

Best regards,

Manager Regional
